

Kester Wax K-24

Koster Keunen manufactures this natural ester from a mixture of coconut and palm oils (RSPO certified sustainable). This low molecular weight monoester is highly compatible with cosmetic ingredients. It is certified by the Natural Products Association (NPA) and approved by the strictest guidelines in the natural community.

Glide without the Greasiness

Formulators will find this solid, fast melting ester indispensable in development. Alone, it will give you a dry and powdery feel on the skin. The initial slip felt on the break is due to its quick phase change and low melt point. When combined with other oils and cosmetic esters it works to “de-grease” formulations. You can regulate and control the esthetics of hair, skin and color products by using K-24, without producing the occlusive feel found with esters and natural oils alone.

Sunscreen Formulation

Studies have shown a significant reduction of the oily skin-feel of sunscreens using K-24 in SPF formulations. Formulas have a powdery after feel without affecting the film of the system, or the esthetics of the product.

Melting Textures

When a formula with K-24 touches the skin, this ester melts giving instant glide. It couples well with ingredients used in color and skin formulation for lighter feeling formulations.

Using Kester Wax K-24

- For hair, skin and color cosmetics
- Dry, powdery feel
- Quick break for instant slip
- Fast phase change can provide initial cooling effect
- Interesting textures due to the solid nature and low melt point
- Reduces greasiness and provide superior emolliency
- Natural replacement for light weight silicones
- Highly esthetic sunscreen formulations
